Announcement of the Launch of LucaTech GX Lite, a New SaaS-type Cloud ERP Product

Miroku Jyoho Service Co., Ltd. (the "Company") today announced that it has decided to launch its new SaaS-type cloud ERP product LucaTech GX Lite ("the new product," hereafter) from Friday, November 28, as detailed below.

1. Background to the launch of the new product

Due to the rapid advance of digitalization in economic and social circles, labor shortages, the spread of diverse workstyles, fluctuations in the prices of goods and other changes in the management environment, small enterprises face the need to further streamline operations, make swift and flexible management decisions, and strengthen their management foundations. The results of the survey of companies and business owners that the company conducted in July this year (Accounting Firm Whitepaper 2025: Progress and Issues of Business Digitalization) also showed that companies and business owners often cite "productivity and efficiency improvements," "business optimization" and "covering labor shortages" as their reasons for pursuing digitalization.

Moreover, against the backdrop of changing workstyles such as working from home and remote work, along with the need for business continuity planning (BCP) to deal with cyber-attacks and natural disasters, there has been growing interest in migrating business systems to the cloud in the area of back-office operations.

In light of these trends, the Company developed the new product as a SaaS-type cloud ERP solution operating on the robust Microsoft Azure platform, and decided to launch it on November 28.

2. Overview of the new product, LucaTech GX Lite

(1) New product overview

For many years, customers have been taking advantage of the extensive functionality and ease of use of the various systems (modules) offered in the Company's ERP products, such as finance, accounting and asset management. Building upon these strengths, the product achieves automation and real-time data sharing through cloud and AI utilization, providing more sophisticated business systems including financial accounting, fixed assets and workflow based around the concept of "systems that minimize accounting operations and enable faster and more advanced management decision-making."

The system architecture (basic structure) and built-in functionality of the new product have been designed based on group usage by a large number of users at a major company. However, to make it usable for small and medium enterprises (SMEs), a downsized structure is used, enabling flexible support based on business size. The new product comes in three editions. Each edition is optimized according to company size, with upper limits on the number of masters, journal entries and assets that can be registered, as well as the availability of optional features.

Initially In response to the urgent need for IT-based business processes and digital transformation for small enterprises, MJS will start to provide LucaTech GX Lite designed for small enterprises. This will be followed by a staggered roll out of two higher-level editions, LucaTech GX Standard, which is primarily aimed at middle enterprises, and LucaTech GX Premier, chiefly designed for medium enterprises. The Company also plans to progressively expand the features and services available across all editions.

MJS, through its DX consulting services, will deliver LucaTech GX via its nationwide network of 33 locations. By doing so, MJS will support customers in streamlining operations, improving productivity, and accelerating digital transformation. MJS is committed to contributing to the advancement of management and the enhancement of corporate value for small and medium enterprises.

(2) Expenditures for commercialization of the new product

It is difficult to reasonably identify and distinguish expenses that fall under special expenditures for the launch of the new product (LucaTech GX Lite) from those associated with the Company's other products. However, to date, the Company has capitalized approximately 8 billion yen in total development costs on its balance sheet for all editions, including the Standard and Premier editions, and anticipates an additional investment of approximately 4 billion yen in future development.

(3) Impact of the new product on consolidated net sales

As the new product will be offered under a subscription model, its impact on business results in the fiscal year ending March 31, 2026 will be minor, with projected sales in the fiscal year ending March 31, 2027 also amounting to around 100 to 200 million yen.

Going forward, however, as subscription model sales continue to accumulate, we expect to hit our five-year sales target of 20 to 25 billion yen in total for all three products in the series, LucaTech GX Lite, Standard and Premier editions. We also expect an increase in sales from our DX consulting service and system installation support service, etc. to coincide with implementation of the new product.

3. Schedule

(1)	Launch Decision Date	October 29, 2025
(2)	Product Launch Date	November 28, 2025

4. Future outlook

While the impact on business results in the fiscal year ending March 31, 2026 due to the launch of the new product is expected to be minor, we believe it will help improve business results of the Company in the medium- to long-term. If it becomes necessary to disclose this information in the future, we will do so promptly.

Please refer to the attached press release for more detailed information.

LucaTech GX Lite, a New SaaS-type Cloud ERP Product from MJS, to Launch in November

**A new system that enables automation and real-time data sharing to help minimize
accounting work and make sophisticated management decisions promptly**

Miroku Jyoho Service Co., Ltd. (Head Office: Shinjuku-ku, Tokyo; President: Hiroki Koreeda ("MJS," hereafter), a developer and vendor of financial and accounting systems and management information services, is pleased to announce that it has developed LucaTech GX, a new SaaS-type cloud ERP product, with the LucaTech GX Lite edition of the series set to launch on Friday, November 28, 2025.

Due to the rapid advance of digitalization in economic and social circles, labor shortages, the spread of diverse workstyles, fluctuations in the prices of goods and other changes in the management environment, small enterprises face the need to further streamline operations, make swift and flexible management decisions, and strengthen their management foundations. The results of the survey of companies and business owners that MJS conducted in July this year (Accounting Firm Whitepaper 2025: Progress and Issues of Business Digitalization) also showed that companies and business owners often cite "productivity and efficiency improvements," "business optimization" and "covering labor shortages" as their reasons for pursuing digitalization. (*1)

Moreover, against the backdrop of changing workstyles such as working from home and remote work, along with the need for BCP (*2) to deal with cyber-attacks and natural disasters, there has been growing interest in migrating business systems to the cloud in the area of back-office operations.

In light of these trends, the newly launching LucaTech GX is a SaaS-type cloud ERP product operating on the robust Microsoft Azure platform. This means the product can be accessed at any time and any place using a web browser, avoiding the hassle of installing and updating applications on PCs.

For many years, customers have been taking advantage of the extensive functionality and ease of use of the various systems (modules) offered in MJS's ERP products, such as finance, accounting and asset management. Building on these strengths, LucaTech GX achieves automation and real-time data sharing through cloud and AI utilization, providing more sophisticated business systems including financial accounting, fixed assets and workflow based around the concept of "systems that minimize accounting operations and enable faster and more advanced management decision-making."

The system architecture (basic structure) and built-in functionality of LucaTech GX have been designed based on group usage by a large number of users at a major company. However, to make it usable for small and medium enterprises (SMEs), a downsized structure is used, enabling flexible support based on business size. The new product comes in three editions. Each edition is optimized according to company size, with upper limits on the number of masters, journal entries and assets that can be registered, as well as the availability of optional features.

Initially In response to the urgent need for IT-based business processes and digital transformation for small enterprises, MJS will start to provide LucaTech GX Lite designed for small enterprises. This will be followed by a staggered roll out of two higher-level editions, LucaTech GX Standard, which is primarily aimed at middle enterprises, and LucaTech GX Premier, chiefly designed for medium enterprises. MJS also plans to progressively expand the features and services available across all editions.

MJS, through its DX consulting services, will deliver LucaTech GX via its nationwide network of 33 locations. By doing so, MJS will support customers in streamlining operations, improving productivity, and accelerating digital transformation. MJS is committed to contributing to the advancement of management and the enhancement of corporate value for small and medium enterprises.

Workflow	Application registration, inquiry / approval route registration / application for editor, etc.

■**Comment from Hiroki Koreeda, President, Miroku Jyoho Service Co., Ltd.**

MJS is pursuing its Medium-Term Management Plan Vision 2028 under the theme of "taking on challenges to reform the business model and create new value." As part of this effort, we have been working to transition our business model to subscription- and cloud-based solutions, with the aim of creating a SaaS-type ERP solution. LucaTech is a product that truly embodies that goal. With this hope in mind, we developed a product name that evokes the image of highly reliable technology by combining the name of Luca Pacioli, the mathematician known as the "father of double-entry bookkeeping," with the word "Technology." Going forward we will continue to add new features and provide new value that will delight customers to support their growth and development.

■**About Miroku Jyoho Service Co., Ltd. (MJS) (<https://www.mjs.co.jp/>)**
