Average exchange rate (¥/US\$)	(¥154.04)				(¥150.17)			

3Q Results

YoY: Shifted from a loss to a profit due to recovery in sales and positive effects from fixed cost reductions.

QoQ: Sales declined due to seasonal trends in consumer. Variable costs increased due to the impact of rising gold prices and quality assurance-related costs for SiC devices. As a result, the profit margin significantly declined.

Full-Year Plan

Benefiting from favorable exchange rates, sales have been revised upwards by ¥20 billion. However, the increase in operating profit is expected to be limited due to quality assurance-related costs for SiC devices and inventory write-downs. The projected foreign exchange rate is ¥153 per USD.

Future Inventory Policy

Excluding foreign exchange impact, work in process and raw materials were reduced by approx. ¥10 billion in 3Q. Adjustments will continue to be made.

Progress of Structural Reform

Price increase negotiations due to the surge of gold prices have secured approval from 70% of customers at present and are progressing as planned. At the same time, replacement with copper wire is being implemented. Regarding the reorganization of manufacturing sites, it has been decided that a part of the manufacturing lines at the Kyoto Head Office will be closed.

Partnership with Toshiba

Discussions are ongoing.
