Regarding the Execution of an Exclusive Distribution Agreement in the Japanese Market for an Intrasaccular Occlusion Device

1. Overview of the Agreement

Asahi Intecc (the "Company") announces that its Board of Directors resolved today to enter into an exclusive distribution agreement with Nuvascular, Inc. ("Nuvascular"), a U.S. company, for the exclusive distribution in Japan of Nuvascular's intrasaccular occlusion device, "HARBOR".

The subject product, "HARBOR," is a medical device currently under development, with clinical trials underway for the treatment of cerebral aneurysms. It has not yet obtained regulatory approval in Japan.

Based on this agreement, the Company plans to proceed with preparations to obtain regulatory approval in Japan. Following approval, the Company plans to commence direct sales to medical institutions in Japan through its wholly-owned consolidated subsidiary, Asahi Intecc J-sales, Inc.

The term of the exclusive distribution rights in Japan under this agreement is five years from the date of regulatory approval. Following this initial term, the agreement is expected to be renewed based on mutual agreement between the two companies.

"HARBOR" is a medical device designed to be placed inside a cerebral aneurysm as a mesh-like structure. By restricting blood flow into the aneurysm, the device is intended to promote thrombus formation within the aneurysm and subsequent aneurysm occlusion. The market for this treatment is expected to expand in the future.

The Asahi Intecc Group has developed products such as guidewires, guiding catheters, and balloon guiding catheters in the field of neuroendovascular treatment, while building relationships with medical institutions and healthcare professionals. As "HARBOR" is used in the same treatment area as these existing products, synergies are expected with the Group's sales network, customer base, and product portfolio.

The Company expects this product to become a new treatment option for cerebral aneurysms in Japan and to provide new value to patients and the medical community.

2. About Nuvascular, Inc.

Nuvascular, Inc. is a medical device company headquartered in California, U.S. The company develops and manufactures innovative therapeutic solutions, including the "HARBOR Occlusion Device," a self-expanding braided nitinol implant, by leveraging its proprietary braiding and processing technologies.
