Notice Regarding Planned Incorporation of Wheeling Charge Revisions into Electricity Rates and Revision of the Extra-High-Voltage and High-Voltage Standard Plans

The Kansai Electric Power Company, Incorporated (the "Company") hereby announces that in light of the revisions to the wheeling charges of the respective general transmission and distribution companies that are planned to take effect on November 1, 2026[*1], the Company plans to reflect those revisions in electricity rates for extra-high-voltage, high-voltage, and low-voltage customers from the same date.

Specific electricity unit rates will be announced separately on the Company's website, based on the revised wheeling charge unit rates and other details to be determined by the respective general transmission and distribution companies.

In addition, effective November 1, 2026, the Company will revise its standard plans for extra-high-voltage and high-voltage customers, primarily corporate customers.

The Company has pursued efficiency improvements, including cost structure reform, with safety and a stable supply of electricity as fundamental prerequisites. However, in addition to increases in costs caused by rising prices and other factors, costs required under regulatory schemes in retail electricity supply[*2] have also increased, and the impact of these cost increases is expected to continue growing. To continue providing customers with a stable supply of electricity despite these changes in the business environment, the Company will revise electricity rate unit prices and other related items under its standard plans for extra-high-voltage and high-voltage customers.

In addition, based on the latest power procurement conditions and other relevant factors in retail electricity supply, the Company will also revise the calculation basis for fuel cost adjustments and market price adjustments[*3] and other related items.

The Company will continue to pursue business transformation and efficiency improvements.

Even amid changes in the environment surrounding the energy business, including future increase in electricity demand, it will provide customers with a stable supply of electricity while working toward the realization of a zero-carbon society.

*1: News release issued by the Agency for Natural Resources and Energy, Ministry of Economy, Trade and Industry, “Receipt of Applications from Eight General Transmission and Distribution Companies for Approval of Changes to Revenue Forecasts for Wheeling Services, etc.” (July 10, 2026).

*2: capacity market contributions payable and costs for procuring Non-Fossil Certificates required to comply with regulatory schemes aimed at ensuring a stable supply of electricity and advancing decarbonization.

*3: A mechanism that automatically reflects fluctuations in spot market prices in Japan Electric Power Exchange in monthly electricity rates. The Company introduced the market price adjustment mechanism in April 2024 for extra-high-voltage and high-voltage customers on its standard plans.
